

Třísková, Hana. *Segmentální struktura čínské slabiky* [segmental structure of Mandarin syllable]. Praha: Karolinum, the Publishing House of the Charles University, 2012.

The English translation of the Contents (April 2013)

Contents

Foreword.....	1
1 Chinese language	3
1.1 Characteristics of the Chinese language.....	14
1.1.1 Genetic affiliation.....	14
1.1.2 Dialects	14
1.1.3 Typological features	15
1.1.4 Historical development.....	15
1.1.5 Tonality.....	17
1.2 Standard Chinese	17
1.2.1 Emergence of standard language, systems of phonetic transcription.....	18
1.2.2 Relationship between <i>putonghua</i> and Beijing dialect	21
1.2.3 Flexibility of language norm.....	22
1.2.4 <i>Putonghua</i> with local accents.....	23
1.2.5 Language norm from the sociolinguistic perspective.....	24
1.2.6 Terms for Standard Chinese.....	24
1.3 The <i>Pinyin</i> alphabet	25
1.3.1 History and functions.....	25
1.3.2 <i>Hanyu Pinyin fang'an</i>	27
1.3.3 Development of transcribing particular sounds	30
1.3.4 Orthographic word: what should be written together?	33
1.3.5 Nature of <i>Hanyu Pinyin</i> – what is it?	34
1.4 Phonological research on Chinese	36
1.4.1 Traditional Chinese phonology	36
1.4.2 Research on Chinese in China proper after 1912.....	38
1.4.3 Modern analyses of the foreign authors.....	41
1.5 Crucial topics in teaching Mandarin pronunciation.....	43

2 SYLLABLE.....	45
2.1 Syllable – general remarks.....	46
2.1.1 Definition of syllable	46
2.1.2 Syllable structure.....	47
2.1.3 Components at the lowest level: onset, nucleus, coda.....	48
2.2 Diphthongs and triphthongs – general remarks	49
2.2.1 What is diphthong.....	49
2.2.2 Articulation of falling and rising diphthongs	50
2.2.3 Vowels, consonants, „semi-vowels“, approximants.....	51
2.2.4 Phonological interpretation of diphthongs.....	55
2.2.5 Triphthongs	59
2.3 Chinese syllabomorpheme	59
2.4 Chinese syllable as a chain of segments.....	62
2.4.1 „Western“ view: consonants and vowels, syllable types.....	62
2.4.2 Chinese view: initial, medial, main vowel, terminal	66
2.4.3 A combined model?.....	70
2.5 Chinese syllable as a hierarchical structure.....	71
2.5.1 Syllable model in traditional Chinese phonology	72
2.5.2 Modern models: Initial-Final, Onset-Rime; CGVX formula.....	73
2.5.3 Duanmu’s concept of “rigid syllable template”	79
2.5.4 Comparison of the models	81
2.5.5 Advantages of the Initial-Final model for language teaching.....	83
2.6 Components C, G, V, X: sound inventories.....	85
2.6.1 Initial consonants (C).....	85
2.6.2 Glides (G).....	87
2.6.3 Main vowels (V).....	88
2.6.4 Ending elements (X).....	89
2.6.5 Varied views on the sound inventories for C, G, V, X.....	91
2.7 Mandarin vowel inventory.....	92
2.7.1 Vowel inventory according to the Western phonologists.....	93
2.7.2 Vowel inventory according to the P.R.C. phonologists	96
2.7.3 Economical systems with a single high vowel phoneme.....	97
2.8 Syllable boundaries – general remarks	98
2.8.1 Syllable boundary cues and their types	99
2.8.2 Prothetic consonants, glottal stop.....	101
2.8.3 Resyllabification.....	102
2.9 Chinese initialless syllables	103
2.9.1 Situation at the syllable boundaries	103
2.9.2 Type of a prothetic consonant is determined by the type of the final	105
2.9.3 Sentence particle <i>a</i> 啊.....	108
2.9.4 Phonological concept of the “zero initial”	111
2.9.5 Duanmu’s “obligatory onset principle”	113
2.10 View of syllable in <i>Pinyin</i>	115
2.10.1 Syllable structure adopted in <i>Pinyin</i>	115
2.10.2 Permissible syllable types / CGVX formulas in <i>Pinyin</i>	117

2.10.3	Sound inventories for C, G, V, X components in <i>Pinyin</i>	118
2.10.4	Overall segmental inventory of <i>putonghua</i>	119
3	INITIALS	121
3.1	Introduction to initials	122
3.2	Articulatory features of consonants	122
3.2.1	Manner of articulation, place of articulation.....	123
3.2.2	IPA consonant chart	124
3.2.3	Tongue involvement	126
3.2.4	Secondary articulation	129
3.2.5	Vocal chords involvement	129
3.2.6	Fortis / lenis articulation	130
3.3	Voice onset time (VOT)	130
3.4	Aspiration	132
3.4.1	What is aspiration.....	133
3.4.2	Transcription of aspirated consonants	134
3.4.3	Which consonants can be aspirated?	134
3.4.4	Source of aspiration noise.....	135
3.4.5	Strength of aspiration.....	136
3.4.6	Duration, tenseness, subglottal pressure	136
3.4.7	Aspiration as a complex of features	136
	<i>Initials – phonetic description</i>	
3.5	Overview of Mandarin phonetic consonants	137
3.5.1	Mandarin consonants: manner of articulation.....	138
3.5.2	Mandarin consonants: place of articulation	139
3.6	Mandarin aspirated consonants	141
3.6.1	Voice onset time of aspirates	141
3.6.2	Source of aspiration noise.....	141
3.6.3	Duration and tenseness of aspirates.....	144
3.6.4	Methodological notes	144
3.7	Mandarin “semi-voiced” consonants	145
3.7.1	Laxness	145
3.7.2	Voicing potential	146
3.7.3	Meaning of the term “semi-voiced”	146
3.7.4	Transcription of Mandarin “semi-voiced” consonants.....	147
3.7.5	Methodological notes	148
3.8	Labials <i>b, p, m, f</i>	149
3.8.1	Manner of articulation	149
3.8.2	Place of articulation, tongue and lips position	149
3.8.3	Transcription of the row	150
3.8.4	Methodological notes	150
3.9	Dentoalveolars: non-sibilant row <i>d, t, n, l</i>, sibilant row <i>z, c, s</i>	150
3.9.1	Introduction to both rows.....	150
3.9.2	Row <i>d, t, n, l</i>	152
3.9.3	Row <i>z, c, s</i>	154

3.9.4	Transcription of both rows.....	157
3.9.5	Comparison of the articulation of both rows	157
3.9.6	Our conclusion	158
3.9.7	Methodological notes	159
3.10	Apical postalveolars <i>zh, ch, sh, r</i>.....	159
3.10.1	Manner of articulation	159
3.10.2	Tongue position.....	159
3.10.3	Place of articulation.....	164
3.10.4	Disputes on articulatory properties of the consonant <i>r</i>	166
3.10.5	Transcription of the row	167
3.10.6	Our conclusion	168
3.10.7	Methodological notes	169
3.11	Palatalized postalveolars <i>j, q, x</i>.....	170
3.11.1	Manner of articulation	170
3.11.2	Tongue position.....	170
3.11.3	Place of articulation.....	173
3.11.4	Other features.....	177
3.11.5	Transcription of the row	177
3.11.6	Our conclusion	177
3.11.7	Methodological notes	177
3.12	Velars <i>g, k, h</i>.....	179
3.12.1	Manner of articulation	179
3.12.2	Tongue position.....	179
3.12.3	Place of articulation.....	180
3.12.4	Transcription of the row	183
3.12.5	Our conclusion	184
3.12.6	Methodological notes	184
3.13	Modifications of articulation of the initial consonants.....	184
3.13.1	Palatalization.....	185
3.13.2	Labialization.....	186
3.13.3	Spread lips.....	186
3.13.4	Articulatory weakening.....	186
<i>Initials – phonological analysis</i>		
3.14	Phonological utilization of laryngeal features in languages.....	187
3.14.1	Distinctive features – general remarks	188
3.14.2	VOT categories used for phonological contrast	189
3.14.3	English stops: voicing contrast or tenseness contrast?.....	189
3.14.4	Comparison of aspiration in English and Mandarin.....	190
3.14.5	“Polarization principle”	192
3.15	Phonological system of Mandarin consonants	193
3.15.1	Laryngeal features	193
3.15.2	Place-of-articulation features	194
3.15.3	Table of initials.....	194
3.15.4	Place-of-articulation consonantal rows.....	195
3.16	Phonological status of the initial <i>r</i>.....	198
3.17	Phonological status of the initials <i>j, q, x</i>.....	199

3.17.1	Are they allophones of the velars?	199
3.17.2	Are they allophones of the alveolar sibilants?	200
3.17.3	Are they allophones of the retroflexes?	200
3.17.4	Are they a separate phonological row?	201
3.18	<i>Pinyin</i> initials	202
3.19	Initials accepted in our analysis	204
3.19.1	Table of initials	204
3.19.2	Consonantal rows – phonological and phonetic view	205
3.19.3	Alphabetical list of the initials with transcriptions	206
4	FINALS	209
4.1	Introduction to finals	210
	<i>Finals – phonological analysis</i>	
4.2	Phonotactics of finals	211
4.2.1	Types of finals, GVX formulas of finals	211
4.2.2	Nature of phonotactic constraints for finals	212
4.3	Duanmu’s analysis of finals (= of GVX formulas)	214
4.3.1	Table of all GVX formulas according to Duanmu	217
4.3.2	Discussing Duanmu’s analysis	218
4.4	Dragunov’s analysis of finals	223
4.4.1	Adoption of syllabic consonants	223
4.4.2	Treatment of high vowels in syllable nucleus	223
4.4.3	Dragunov’s “square system” of finals	225
4.5	Our proposal for the analysis of finals	228
4.6	Traditional categories of finals: <i>sì hū</i>	233
4.7	Inventory of phonological finals	235
4.7.1	Finals of the V type	235
4.7.2	Finals of the V ^V , V ^C type	235
4.7.3	Finals of the ^G V type	237
4.7.4	Finals of the ^G V ^V type	238
4.7.5	Finals of the ^G V ^C type	239
4.8	Mandarin polyphthongs (diphthongs a triphthongs)	243
4.8.1	Phonetic properties of Mandarin polyphthongs	245
4.8.2	Phonological description of Mandarin polyphthongs	251
4.8.3	Polyphthongs in <i>Pinyin</i>	252
4.8.4	Polyphthongs in our analysis	252
4.9	Special finals	255
4.9.1	“Apical vowels”	255
4.9.2	Retroflexed vowel [ɤɪ]	260
4.10	Finals in <i>Pinyin</i>	263
4.10.1	Table of finals in <i>Hanyu Pinyin Fang’an</i>	263
4.10.2	Finals with the main vowel /o/	265
4.10.3	Finals in the analyses working with <i>Pinyin</i>	267
4.10.4	Orthographic amendments of some <i>Pinyin</i> finals	269

4.10.5	Orthography of the zero-initial syllables in <i>Pinyin</i>	270
4.11	Finals accepted in our analysis	275
4.11.1	Components G, V, X in our analysis	275
4.11.2	Categories of finals in our analysis	275
 <i>Finals – phonetic analysis</i>		
4.12	Introduction.....	278
4.12.1	Varied transcription of finals	279
4.12.2	Final as a sound unit	280
4.13	Segmental processes in finals	281
4.13.1	Modifications of sounds depending on their function within a final.....	281
4.13.2	Filling the onset in the zero-initial syllables	282
4.13.3	Filling the empty nucleus.....	282
4.13.4	Deletion / insertion of schwa	282
4.13.5	Assimilation	283
4.14	Pronunciation of subfinals (VX)	285
4.14.1	Assimilation of the main vowel to the terminal	285
4.14.2	Assimilation of the terminal to the main vowel	286
4.15	Pronunciation of the nasal finals	286
4.15.1	Nasal consonants – general remarks.....	286
4.15.2	Mandarin nasal terminals.....	287
4.15.3	Do the terminals <i>-n</i> , <i>-ng</i> have a consonantal nature at all?	292
4.15.4	Other specifics of nasal finals	294
4.15.5	Methodological notes	296
4.16	Pronunciation of the V type finals	296
4.17	Pronunciation of the V^V type finals.....	306
4.18	Pronunciation of the V^C type finals.....	313
4.19	Pronunciation of the ^GV type finals	315
4.20	Pronunciation of the ^GV^V type finals.....	320
4.21	Pronunciation of the ^GV^C type finals.....	322
4.22	Pronunciation of zero-initial syllables	334
4.23	Allophones of <i>Pinyin</i> vowel phonemes in particular finals	338
4.24	Other modifications of vowels within the finals	340
4.25	Alphabetical list of the finals with transcriptions	345
5	INVENTORY OF SEGMENTAL SYLLABLES	349
5.1	Syllable as a combination of initial and final	350
5.2	Combining the rows of initials with <i>sì hū</i> categories of finals	350
5.3	Table of all <i>putonghua</i> syllables.....	354
5.4	What the table of syllables tells us	355
5.5	Overall number of <i>putonghua</i> syllables.....	356

5.5.1	Number of segmentally different syllables	356
5.5.2	Number of segmentally and tonally different syllables.....	357
5.5.3	Some consequences of a meagre syllable inventory	358
6	CONCLUSION	361
7	ENGLISH RÉSUMÉ	365
8	APPENDICES.....	367
	Alphabetical list of Mandarin syllables with transcriptions	368
	Vocabulary of linguistic and phonetic terms (Czech – Chinese).....	384
	List of abbreviations and symbols.....	408
	Speech organs chart.....	409
	International Phonetic Alphabet.....	410
	List of figures.....	412
	Literature.....	418
	Index	431
